# Training Guide

1. Logging In

To log into CheckIn Enter the provide username and password associated with the account. Type these into the text inputs and click submit. This will prompt the user to the homepage of CheckIn (Default Username + password: support)

2. Sign Up

To register a new account, enter your name, valid email address, date of birth, and password. Click register for your account to be created.

3. Settings

Withing CheckIn the user will have access to many different accessibility features, to access this menu, while checked in navigate to the bottom right profile icon.

From here the user can update their application to their needs. For instance, if a user has a hard time reading text in the application, they may want to adjust the text size to display more appropriate font size.

4.Reserve

To reserve a spot click on locations and select one of the venues that are present. It will then take you to the reserved screen where you fill out your information including name, email address, and phone number.
5. CheckIn

Once the reservation has been created, the user can access the reserved spot by clicking on the CheckIn button located in the bottom navigation. From there they can check into a reservation that they have created.
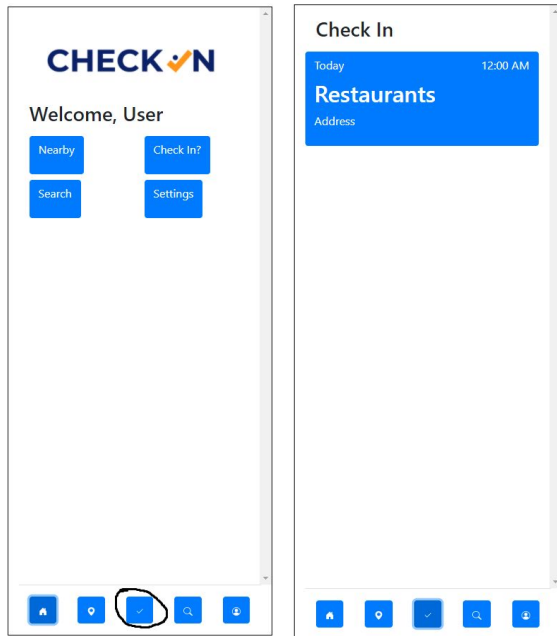

Current known Funtionalalitly issues:

- If the page is blank: "/" + refresh
- No data is stored is to a backend database
- Once you refresh the page, all the work you have done is lost
- Just for the point of demonstration, you are able to create an account but the account won't be saved
- Any other time outside testing out registration just login with default credentials
- if the page is blank after successful logging in or successful registering use the home icon(bottom left) to start at the home page
- Text input in search does not conduct a search or have a function
